

# HARD FLOORS + FLOOR HEAT = COMFORT

Polished concrete is the perfect option for modern day flooring. It gives a sleek, high end look with a durable, lowmaintenance finish.

During the winter months the polished concrete can feel cold. Hydronic under floor heating is the best way to warm your floors keeping them comfortable all year round.

Comfort Heat are experts in working with Architects, Builders and Engineers to install the best hydronic floor heating system to achieve a high end polished concrete finish.
